DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4, 8-12, 16-17 and 20-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Wadensweiler et al (US 5978202).

Wadensweiler et al discloses a plasma processing reactor configured for etch (Fig 1), a thermal shim of disk shaped (Fig 2a), ring with a hole (Fig 2b), low thermal region and high thermal region (Fig 2a-c-100 and Col 7 lines 5-11, 36-40, 64-67 and Col 8 lines 1-26), adaptable to be placed under the electrostatic chuck and above the heat exchanger (Fig 1).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 5-6, 13-14 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wadensweiler et al (US 5978202) in view of Kenji Kobayashi (JP 09027398)

Wadensweiler et al do not disclose the thermal shim to be made of a metal like aluminum.

.Application/Control Number: 09/993,240

Art Unit: 1763

Kenji Kobayashi discloses a thermal shim of aluminum having ring like shape (Fig 1-43, 71 and 73 and paragraph 0026).

Therefore it would have been obvious for one of ordinary skill in the art at the time invention was made to use metal thermal shim for its good thermal conductivity.

5. Claims 7, 15 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wadensweiler et al (US 5978202) in view of Jones et al (US 5031689).

Wadensweiler et al do not disclose the thermal shim to be made of a corrugated material.

Jones et al disclose a thermal shim of a corrugated material (Fig 1-12 and 14).

Therefore it would have been obvious for one of ordinary skill in the art at the time invention was made to use a thermal shim of corrugated material so as not have problems due to differential thermal expansion between top and bottom surface.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ram N Kackar whose telephone number is 703 305 3996. The examiner can normally be reached on M-F 8:00 A.M to 5:P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Mills can be reached on 703 308 1633. The fax phone numbers for the organization where this application or proceeding is assigned are 703 872 9310 for regular communications and 703 872 9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308 0661.
